

1. In addition to the current locations of the fishing warning signs now posted, where are some other locations for the additional placement of fishing warning signs?
2. What additional steps could the partners take to improve awareness about the fish and shellfish consumption advisory?
3. What are some of the contributions that other state and local stakeholders can make to the clean-up related to the site?
4. EPA's community involvement tools typically include:
  - Fact sheets sent to the site mailing list
  - Community/public meetings
  - Postcards sent to the mailing list to invite stakeholders to meetings or to provide other site-related information
  - Public notices and news releases to local news media
  - One-on-one interviews
  - Community Involvement Plans
  - Public Service announcements
  - Media availability sessions/interviews
  - Meetings at churches & schools

Are there other tools EPA could use to enhance communication with stakeholders in the San Jacinto community?

5. What are some ways other than fishing, boating, wading, and working along the banks, that people are exposed to the contaminants from the site?
6. What are some of the contributions that other state and local stakeholders can make to the public awareness process related to the site?
